Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The marker protein is preferably a type A beta-lactamase, especially TEM-1 beta-lactamase of Escherichia coli. The oligopeptide is a member of a proteome library selected from single chain antibody Fv fragment library, an antibody light chain variable region library and a peptide library displayed within thioredoxin. The IdEA systems are useful for detecting and identifying interactions between intracellular as well as extracellular proteins, particularly between two or three polypeptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Interaction-dependent enzyme association systems for detecting interactions between two or three polypeptides, especially in human therapeutics, diagnostics or prognostics, comprise circularly permutated

                                                                                                                                                                                                                                                                                   The present invention describes a fragment complementation system (I) CC which comprises a first oligopeptide (OP1) containing an N-terminal CC fragment with a C-terminal break point and a second oligopeptide (OP2) CC comprising a C-terminal with a N-terminal breakpoint, in which the C and CC reassemble to form a functionally reconstituted MP. Methods from the CC present invention are used for monitoring the occurrence of protein (MP) and CC protein interactions in a sample, identifying oligopeptide interactions CC between two different proteomes, identifying epitopes that bind to an CC immunoglobulin (Ig) variable region, for identifying interactions between CC an extracellular domain of a transmembrane protein and a polypeptide, for CC injunted signal transducers, forming a maryme complementation system for cegulated signal transducers, forming a enzyme complementation system for CC selecting simultaneous incorporation of multiple genetic elements into a host who is in need of it. The present sequence represents CC the Escherichia coli mature TEM-1 beta-lactamase, which is used in the CX compound in a host who is in need of it. The present sused in the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ક
The invention describes a fragment complementation system (I) comprising CC a first oligopeptide having an N-terminal fragment with a C-terminal CC break-point, and a second oligopeptide having a C-terminal fragment with CC a N-terminal break-point, where the N-terminal fragment and the C-CC terminal fragment each are derived from a marker protein and reassemble CC to form a functionally reconstituted marker protein. (I) is useful for CC selecting simultaneous incorporation of multiple genetic elements into a CC compound in a host. The method described is useful for identifying a CC second oligopeptide to which a first oligopeptide binds, involving co-CC expressing the first and second oligopeptides. Binding of the first CC compound the cocurrence of protein. The method is also useful for CC identifying oligopeptide interactions in the functional CC reassembly of the marker protein. The method is also useful for CC identifying oligopeptide interactions between two different proteomes; CC identifying oligopeptide interactions between two different proteomes; CC identifying epitopes that bind to an immunoglobulin variable region. CC (I) or an expression casette (II), encoding a selectable N or C-terminal CC domain of a transmembrane protein and a polypeptide, where the CC transmembrane protein is an immune cell protein, perferably CD40. (I) or inhibit phosphorylation-regulated cell signal transducers. (I)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           fragment complementation system; marker protein; multiple genetic element incorporation; antibiotic resistance; beta-lactam derivative activation; anti-tumour compound; functional reassembly; protein-protein interaction; proteome immunoglobulin variable region; immune cell protein; CD40;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Fragment complementation system for detecting immunoglobulin epitope, has first oligopeptide containing N-terminal fragment with C-terminal break-point, second oligopeptide containing C-terminal fragment with N-terminal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           US2004038317-A1.

Expression of the beta-lactamase in a targetted cell allows conversion of a prodrug into an agent toxic to the cell for treatment of cancer, viral (e.g. HIV) infection or inflammation.

Secretion of the enzyme has the advantage of increasing neighbouring center.
 The intracellular form (AAW18680) of TEM beta-lactamase is expressed by pCMV-delBL (AAT70311) in which a PCR-amplified beta-lactamase coding sequence, minus the signal sequence, is placed under control of the intermediate/early promoter of cytomegalovirus. Intracellular beta-lactamase constructs, placed under control of promoter/enhancer elements of lung-associated protein or neuroendocrine marker protein genes, can be
                                                                                                                                     DNA construct for gene-directed enzyme prodrug therapy of lung cancer comprises lung- or neuroendocrine-specific promoter controlling

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               0
```

The expression constructs pRNH127 and pRNH155 contain identical sequences but were constructed using different strategies (see AAQ36498). The constructs comprise exons 2-7 of human CYP1A1 gene under the control of the inducible mouse metallothionein (MMT-1) promoter. The constructs also contain an open reading frame in the opposite orientation to the cytochrome P450 exons. This ORF encodes ampicillin resistance. The constructs are suitable for transformation of human fibroblasts derived from the xeroderma pigmentosum group A. Cultures of the transformed fibroblasts can be used to test substances for mutagenicity. The presence

(Updated on 10-MAR-2003 to add missing OS field.)
pCMV-BL (AAT29220), in which the beta-lactamase coding sequence is under the control of the intermediate/early cytomegalovirus promoter. Beta-lactamase delivery to mammalian cells confers sensitivity to cephalosporin prodrugs. Liposomal DNA/5-fluorouracil prodrug combinations resulted in s.c. tumour regression in mice bearing A549 tumours. Survival of mice bearing human large cell lung H460 intrathoracic (i.t.) tumours was increased upon i.t. injection of the secretory beta-lactamase DNA
                                                                                                                                                                                                                                                                                                                              Molecular chimaera for use in enzyme gene therapy - is activated in target cell to express a secretable enzyme which cleaves a prodrug outside the cell into a cytotoxic or cytostatic agent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gene therapy; gene directed enzyme prodrug therapy; GDEPT; virus directed enzyme prodrug therapy; VDEPT; prodrug activation; cytotoxic; cytostatic; cancer; tumour; retrovirus; vector;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               83
```

The present sequence is encoded by a chimeric mouse metallothionein-cytochrome P450IA1 (CYPIA1) expression construct. Two clones, pRNH127 and pRNH15, were isolated by different methods and which both had the same sequence. The CYPIA1 construct is used in assays to test for cytotoxicity of humans to a chemical. The method comprises exposing human fibroblast cells normally not including any cytochrome P450 activity to potentially toxic chemicals. The cells having been transforme to express cytochrome P450, under the control of a controllable promoter through the CYPIA1 gene, upon exposure to the chemical in vitro. The chemical is metabolised intracellularly into a cytochrome metabolite by oxidation within the

                                  Escherichia coli beta-lactamase (AAW16635), lacking the signal peptide, is the expression product of a molecular chimaera, designated pCMV-delBL (AAT66738), in which the beta-lactamase gene is under control of the CMV intermediate/early promoter. Vectors consisting of a transcriptional regulatory DNA sequence linked to a beta-lactamase gene can be used for enzyme prodrug therapy. Intracellular expression of the beta-lactamase in a targetted cell allows conversion of a prodrug into an agent toxic to the cell for treatment of cancer, viral (e.g. HIV) infection or
                                                                                                                                                                                                                                                                        Example;
                                                                                                                                                                                                                                                                                                                          Molecular chimaera for gene or virus directed enzyme prodrug therapy useful for treatment of cancer, viral infection or inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    fibroblasts through the intracellular cytochrome P450 mixed function oxidase enyemes expressed by the cells. Gene damage in the test cells is detected as an indication of cytotoxicity of the chemical. (Updated on 25-MAR-2003 to correct PF field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          र्
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches
This invention describes a novel tetracycline assay that uses recombinant prokaryotic cells comprising a luciferase gene under the transcriptional control of a tetracycline repressor and tetracycline promoter and involves the detection of luminescence emitted form the cells. The assay can be used to distinguish tetracycline form other microbial agents. The invention also describes a novel plasmid comprising either the luxCDABE genes, a tetracycline repressor (TetA) and a tetracycline promoter (TetA) and a tetracycline repressor (tetR) and a tetracycline assay and a tetracycline promoter (TetA) from Tn10. The tetracycline assay method can be used for the determination of tetracycline in a sample,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Firefly; luciferase; tetracycline; transcriptional control; TetR; TetA; tetracycline repressor; tetracycline promoter; luminescence; luxCDABE; insect; Tn10; medicine; dosage; cheese production; antibiotic; foodstuf
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Vector pASK75

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            e.g. to study the dosage and penetration of the medicine. The method can also be used to test cheese production, as cheese making bacteria are not able to work in the presence of tetracycline. The method can also be used to determine the presence of concentration of antibiotics in foodstuffs, e.g. for allergic people. The present assay method does not rely on the growth of microbes as do conventional tests, and so is much more rapid. The present assay is also more sensitive, as even a small amount of

The method is used to select MAb with specificity for particular antigens. MAb can be selected without separate culture of hybridomas, and selection can be made against many antigens in a library, optionally on the basis of strength of affinity for a particular antigen. Complex mixtures of hybridomas can be used for selection, reducing the time and cost involved in MAb selection. This sequence represents the bla protein protein contained in the expression vector pSEX15G2 which contains the bla protein, Neo-R and protein G described in the method of the invention
                                                                                                                                         Selecting monoclonal antibodies, by expressing them on the surface hybridomas attached to antibody-binding protein, then reaction with antibody library.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     11-JAN-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              888888888888888888888
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CC This invention describes a novel method for the selection of monoclonal CC antibodies (MAb) which comprises (i) fusing B lymphocytes with myeloma CC cells to produce antibody-producing hybridomas such that the antibodies CC are presented at the surface of the hybridomas by an antibody-binding protein (I); and (ii) binding the antibody to antigens (Ag). The CC invention also describes antibody-binding proteins (I) that comprise a CC combination of the signal peptide of a murine immunoglobulin (Ig) kappa CC thain or a murine MRC (major histocompatibility complex) Class I k(k) CC molecule; an antibody-binding site of proteins A, G, L or LG, and the CC transmembrane domain of PDGPR (plattelet-derived growth factor receptor) CC or CD52. The method is used to select MAb with specificity for particular CC entigens. MAb can be selected without separate culture of hybridomas, and CC entigens. MAb can be selected without separate onlivers of hybridomas, and CC mixtures of hybridomas can be used for a particular antigen. Complex CC mixtures of hybridomas can be used for selection, reducing the time and CC cost involved in MAb selection. This sequence represents the Neo-R CC protein contained in the expression vector pSEXIII4 which contains the CC bla protein, Neo-R and protein G described in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This invention describes a novel method for the selection of monoclonal CC antibodies (MAb) which comprises (i) fusing B lymphocytes with myeloma CC cells to produce antibody-producing hybridomas such that the antibodies CC are presented at the surface of the hybridomas by an antibody-binding CC protein (I); and (ii) binding the antibody to antigens (Ag). The CC invention also describes antibody-binding proteins (I) that comprise a CC combination of the signal peptide of a murine immunoglobulin (Ig) kappa CC chain or a murine MHC (major histocompatibility complex) Class I k(k) CC molecule; an antibody-binding site of proteins A, G, L or LG, and the CC transmembrane domain of pogera (platelet-derived growth factor receptor) CC or CD52. The method is used to select MAb with specificity for particular CC contigens. MAb can be selected without separate culture of hybridomas, and CC election can be made against many antigens in a library, optionally on the basis of strength of affinity for a particular antigen. Complex CC mixtures of hybridomas can be used for selection, reducing the time and CC cost involved in MAb selection. This sequence represents the bla protein CC bla protein, Neo-R and protein G described in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches
